

CORPORATE POLICY

The company M. JÜRGENSEN supplies cylinder liners worldwide, which are used in diesel and gas engines as well as compressors. Our market position is built on competitive prices, high delivery reliability, high quality of our products and our flexibility in meeting customer requirements.

Our aspiration

Our aim is to strengthen and extend our market position as a competent manufacturer of cylinder liners. Successful presence on international and technologically demanding markets is M. JÜRGENSEN's incentive to develop our customers' products continually by bringing in our experience and knowledge of materials and processing methods. In this connection we set a high value on cooperation with our customers and suppliers, as this is the only possible way to improve processes continually.

Cutting-edge equipment, a cooperative and constructive relationship with our employees and their consequent qualification trainings are the basis of the constant enhancement of our production expertise.

At the same time, we are aware of our responsibility for present and coming generations and that requires a careful use of available natural resources. In this sense, the work policies compiled by our company in recent years and recorded in the in-house Management Handbook present a guideline for our day-to-day activities.

Quality, environmental, work safety and energy policies

The management of M. JÜRGENSEN is responsible for the quality of its products as well as for the environmental, work-safety and energy compatibility of our infrastructure, production facilities, processes and products. The permanent task of the company management is to support and constantly increase the awareness of quality, environmental, work-safety and energy concerns at all levels as well as providing the necessary resources. The existing integrated management system is based on the standards of DIN EN ISO 9001, DIN EN ISO 14001 and DIN EN ISO 50001.

Quality, environmental concerns, work safety and energy efficiency are the responsibility of every employee. Our company's aim is to manufacture products, which ensure a maximum of customer satisfaction including special requirements relating to product's cleanliness and their use in the nuclear sector by using the most efficient and economically viable equipment available. This also includes a continually improvement of the energy-related performance.

M. JÜRGENSEN is committed to observe all relevant legal obligations and other requirements regarding quality, environment, work safety and energy. Furthermore our company's aim is to reduce any negative environmental impact and work-safety deficits at such extent as it can be achieved by using the most economically viable technology available, concerning the continually improvement of energy-related performance.

By regular trainings and personal instructions or rather the provision of suitable resources, the company ensures that quality, environmental, work-safety and energy policies as well as their objectives are implemented. Regular internal audits guarantee that the quality, environmental, work-safety and energy policies are well-known by all employees. The results of these audits are valuable aids in the constant improvement of the efficiency of the management system.

Management and employees of M. JÜRGENSEN are aware that fulfilling recognized quality, environmental, work-safety and energy standards is not manifested by creating internal regulations and organizational policies, but only by implementing them in daily practice. With this in mind, the entire company is ready to be measured by the corporate policy standards documented in the Management Handbook.
